

Collaborating in Git(hub)

(2) Asma creates repo on GitHub and pushes code. The repo must be public.

(4) At the end of the lab, Kim heads to Asma's GitHub and clones the repo, so they have a local copy of the code.

github.com/studentA/lab

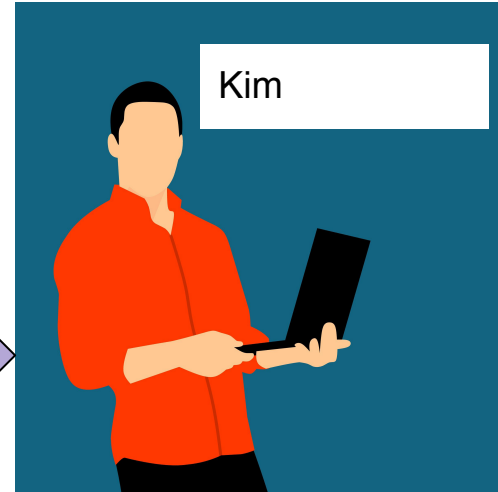

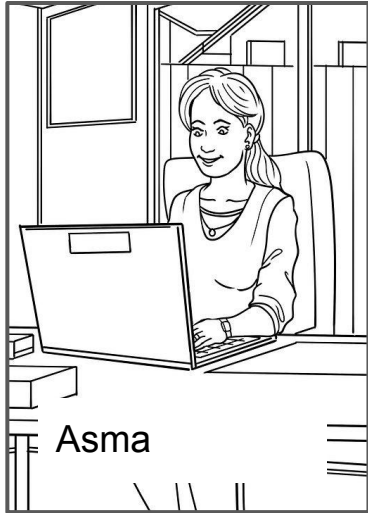

git clone

(1) Asma creates project on laptop with initial file structure

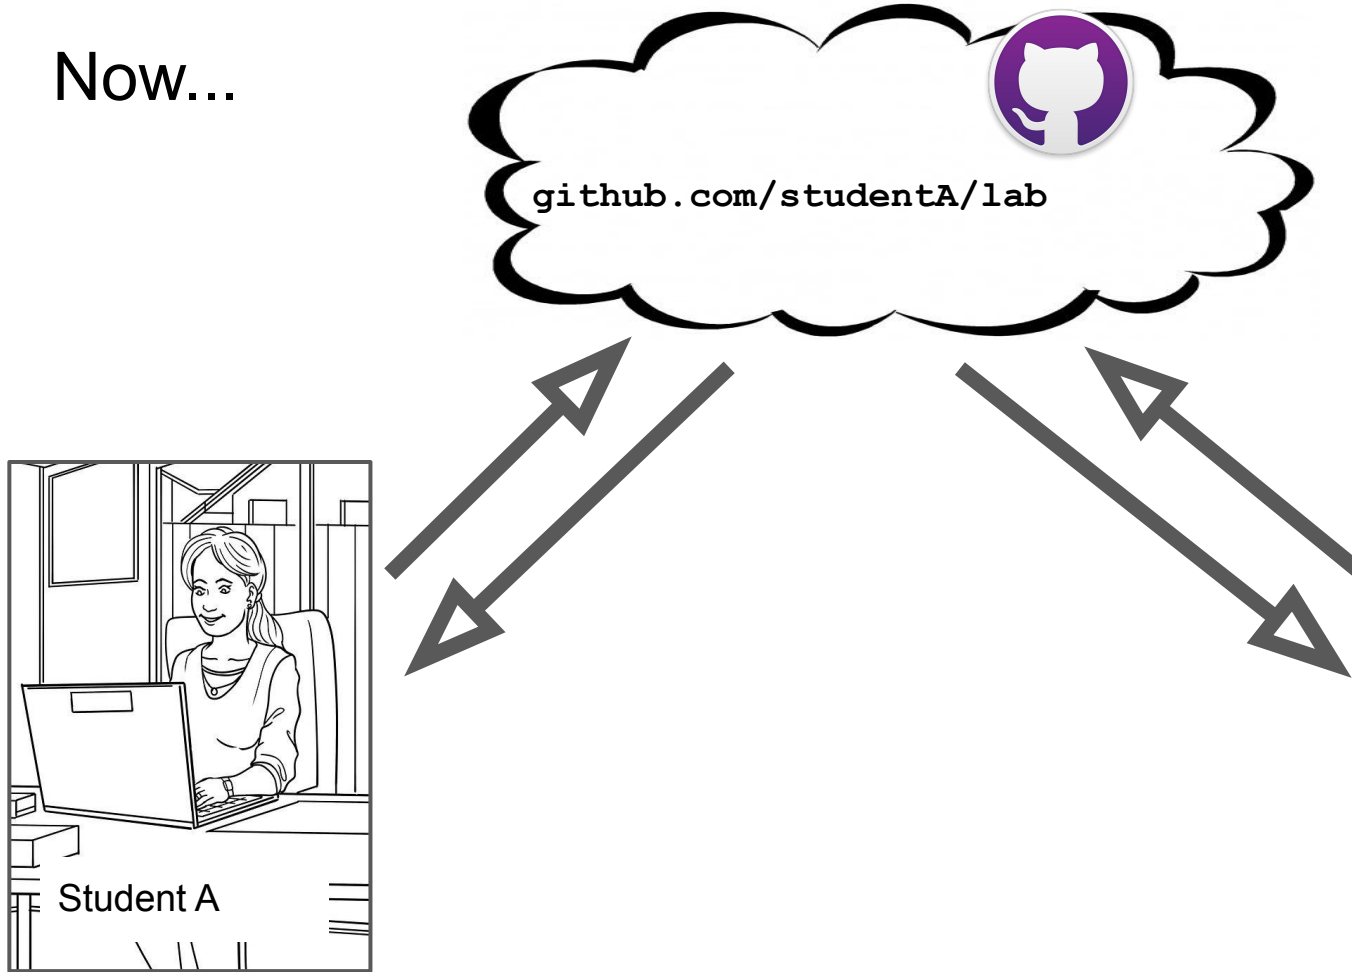

(3) Pairs/groups use CodeTogether to take turns driving/navigating

Kim

Asma

Now...

Note: the repo can belong to either Student A or B

Student B

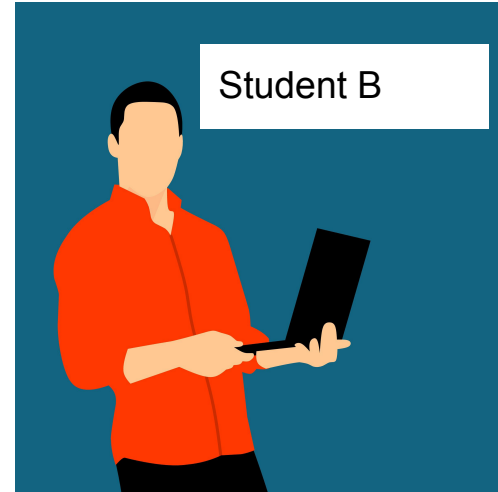

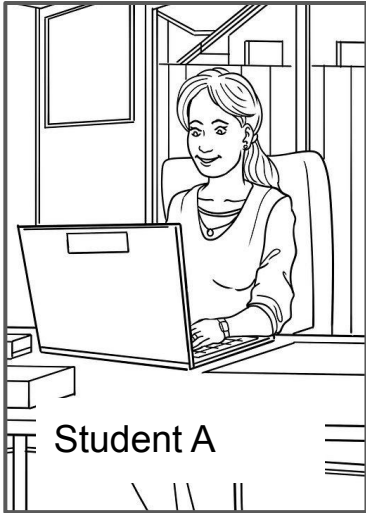

Next steps...

Add Student B as a collaborator

github.com/studentA/homework_lab

```
gaa  
git commit  
git push
```

```
git clone
```

Next steps...

Add Student B as a collaborator

github.com/studentA/lab

```
git pull  
git push
```

```
git pull
```

```
gaa  
git commit  
git push
```
